ABSTRACT

On e-commerce platforms, where numerous choices are available, an efficient recommendation system is required to sort, order, and efficiently convey relevant product content or information to users. Fashion applications have seen tremendous growth and are now one of the most used programs in the e-commerce field. The needs of people are continuously evolving, creating room for innovation among the applications. We are implementing such a chat bot, which is fed with the knowledge of the application's algorithm and helps the user completely from finding their needs to processing the payment and initiating delivery. It works as a filter search that can bring the user what they want with the help of pictorial and named representation.

1. INTRODUCTION

1.1 Project Overview:

A recommendation system is a system that is programmed to predict future preferable items from a large set of collections. A recommendation system works either by using user preferences or by using the items most preferred by all users. The main challenge in building a fashion recommendation system is that it is a very dynamic industry. It changes very often when it comes to seasons, festivals, pandemic conditions like Covid19 and many more. Recommendation generation is to generate recommendations, our proposed approach uses Sklearn Nearest neighbours Oh Yeah. This allows us to find the nearest neighbours for the given input image. The similarity measure used in this Project is the Cosine Similarity measure. The top 5 recommendations are extracted from the database and their images are displayed.

1.2. Purpose:

Recommender system has the ability to predict whether a particular user would prefer an item or not based on the user's profile. Recommender systems are beneficial to both service providers and users. They reduce transaction costs of finding and selecting items in an online shopping environment. Recommender Systems are often used to solve different complex problems in this scenario, such as social fashion-based recommendations

(outfits inspired by influencers), product recommendations, or size and fit recommendations.

The main objective of this application is to provide better interactivity with the user and to reduce navigating pages to find appropriate products. This can be done with a new innovative solution through which user can directly do his/her online shopping based on their choice without any search. It can be done by using the chatbot. These attributes are then fed to a similarity model to retrieve the most closest similar products as recommendation.

2. LITERATURE SURVEY

2.1 EXISTING PROBLEM

In E-commerce websites, users need to search for products and navigate across screens to view the product, add them to the cart, and order products. The user searches for the required product but in return it might lead to the suggestion of irrelevant products. The process of time consumption is quite tedious and there is a lack of data analytics capability in the existing system.

(1) Fashion Recommendation Systems, Models And Methods

Samit Chakraborty, Md. Saiful Hoque: 2021

Recommendation system (RS) has also been defined as an e-commerce tool, which helps consumers search based on knowledge that is related to a consumer's choices and preferences. There are several Algorithmic Models used in Fashion Recommendation Systems. The study of algorithmic models revealed that researchers achieved better recommendation accuracy when combining multiple algorithms and techniques together rather than using a single algorithm-based baseline model.

(2) Design and Implementation of Clothing

Fashion Style Recommendation

System using Deep Learning

-Muhammad KHALID , Mao KEMING and Tariq HUSSAIN : 2021

The present paper presents the development of a system that recognizes fashion similar images. This can be accomplished by implementing an already existing CNN model with transfer learning for cloth image recognition using different libraries. For this purpose, a plan is created for collecting data and for developing the steps needed for preprocessing and cleaning up the data. Account features like patterns, machine, fabric, style etc are taken. After extensive preprocessing and cleaning of data in a dataset, the model of stacked CNN to predict the features specific to these attributes is constructed and to train the models with the dataset to generate accurate predictions regarding almost all forms of images

(3) Image-based fashion recommender systems

- Shaghayegh Shirkhani : 2021

Focusing on image-based fashion recommender systems, a four main tasks are identified in fashion recommender systems, bringing their characteristics to the fore, including cloth-item retrievals, Complementary item recommendation, Outfit recommendation, and Capsule wardrobes. The studies which have been conducted in each category also have been introduced. In addition, the evolvement trajectory of image-based fashion recommender systems are provided , which consists of three main eras, in addition to considerations of the most recent advancements in computer vision and deep learning-based methods. Finally, the DL-based fashion recommender systems based on employing one single neural network or deep hybrid neural networks with highlighting the methods they used and the input are categorized.

2.3. Problem Statement Definition:

I am	I'm trying to	But	Because	which makes me feel
A Student	Search for School Bag	I am not familiar with Online Shopping	Too many products available and can't able to select the best one	Confused
I am	I'm trying to	But	Because	which makes me feel
A Student	Search for School Bag	Can't place the order	The product is out of stock	Sad
I am	I'm trying to	But	Because	which makes me feel
A Student	Find Best Offer through Assistance	No one is available	The service is busy right now	Frustrated
I am	I'm trying to	But	Because	which makes me feel
The User	Search for trendy outfit for a party	There is No new collection	The collections were not updated	dejected
I am	I'm trying to	But	Because	which makes me feel
The User	Avoid spending time on Shopping	I'm not getting relevant products on Online shopping	I need of best recommendations	Worried

3. IDEATION & PROPOSED SOLUTION

3.1. Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

3.2. Ideation & Brainstorming:

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

TEAM LEAD - Prabakaran G

Effective Recommendations	Delivery Notification via Sendgrid	Variety of Products
Online Tracking	Best Products	24x7 Shopping

TEAM MEMBER 2 - Sanjay D

Availability of the product	No Need to Travel	Keep in Current Trend
Saves Time	Adding Products to the cart	Easy to use

TEAM MEMBER 3 - Varun P

Customer Feedback	Best Prices	Notification via Chatbot
Deals and Offers	Access products through chatbot	Reviews on Products

TEAM MEMBER 4 - Aakash K

Comparisons	No Pressurized shopping	Order Confirmation via Sendgrid
Product Information	Database of Products	Product Ratings

3

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

3.3. Proposed Solution:

S.NO	Parameter	Description
1.	Problem Statement (Problem to be solved)	In E-commerce websites, users need to search for products and navigate across screens to view the products. It may also lead to irrelevant product suggestions.
2.	Idea/Solution description	The smart fashion recommender application leverages the use of a chat bot to interact with the users, gather information about their preferences, and recommend suitable products to the users.
3.	Novelty/Uniqueness	The Users give preferences to the ChatBot which helps to find their required products.
4.	Social Impact/ Customer Satisfaction	The user-friendly interface makes the users find their products quickly which saves time as well as money.

5.	BusinessModel(RevenueModel)	The chat bot recommends the products best suited for the customer. The customer buys the product and generates revenue but the use of the application is free of cost.
6.	Scalabilityofthe Solution	The scalability can be increased by increasing the number of products and also accuracy of the product suggestions.

3.4. Problem SolutionFit:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS <ul style="list-style-type: none"> Users <p>(Example : Shoppers like Price-Sensitive Shoppers. Experience Shoppers. Ready-to-Purchase Shoppers. Latest Product Shoppers. Research Shoppers.)</p>	6. CUSTOMER CONSTRAINTS CC <ul style="list-style-type: none"> Network Issues. Additional Delivery Charges. Payment Failures. Poor Tracking. Missing or Fake Product Reviews. 	5. AVAILABLE SOLUTIONS AS <ul style="list-style-type: none"> Using chatbot, we can manage user's choices and orders. Providing recommendations to the users, based on their interests. Best Offers and Deals via Chatbot. Better Tracking of Orders.
	2. JOBS-TO-BE-DONE / PROBLEMS J&P <ul style="list-style-type: none"> The user will login into the website and go through the products available on the website. The user can directly talk to Chatbot regarding the products. Get the recommendations based on information provided by the user. 	9. PROBLEM ROOT CAUSE RC <ul style="list-style-type: none"> Adapting to new technologies Security Reliability Poor Tracking 	7. BEHAVIOUR BE <ul style="list-style-type: none"> Searching for Better Fashion Recommender Platforms. Finding the better Customer Service. Finding for the best deals and offers. Best and Reliable Products.
Identify Strong TR & EM	3. TRIGGERS TR <ul style="list-style-type: none"> Through advertisements , The users are triggered in fashion. Seeing Neighbours using the application 	10. YOUR SOLUTION SL <ul style="list-style-type: none"> Implementation of Interactive Chatbots. Providing effective Recommendations. Instant Notifications regarding the status of the order. Providing reliable information of the products and customer reviews. 24 x 7 Customer services. 	8. CHANNELS of BEHAVIOUR CH
	4. EMOTIONS: BEFORE / AFTER EM <p>Before : Anxiety , Decision Fatigue.</p> <p>After : Peaceful, Satisfied.</p>		8.1 ONLINE: <ul style="list-style-type: none"> Order and Payments through online. Tracking of products. 8.2 OFFLINE: <ul style="list-style-type: none"> Purchasing and manual billing. Buy the products from the salesperson directly.

4. REQUIREMENT ANALYSIS

4.1. Functional Requirements:

- Sign up as user
- Confirmation mail received by user after registered
- Login of admin
- Change personal,contact details by donor himself
- Change personal,contact details by admin
- Access Chat Bot by User
- Send plasma request details

4.2 Non-Functional Requirement:

1. **Performance:** Application should be designed and developed in such a way that it should not utilize too many resources.
2. **Usability:** Usability defines how well the application meets the requirements of the user and consumer by being intuitive, easy to localize and globalize, providing good access for disabled users, and resulting in a good overall user experience.
3. **Secure:** Login system should be safe and secure.

5. PROJECT DESIGN

5.1 Data Flow Diagram & User Stories:

5.1 Data Flow Diagram:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirements graphically. It shows how data enters and leaves the system, what changes the information and where data is stored.

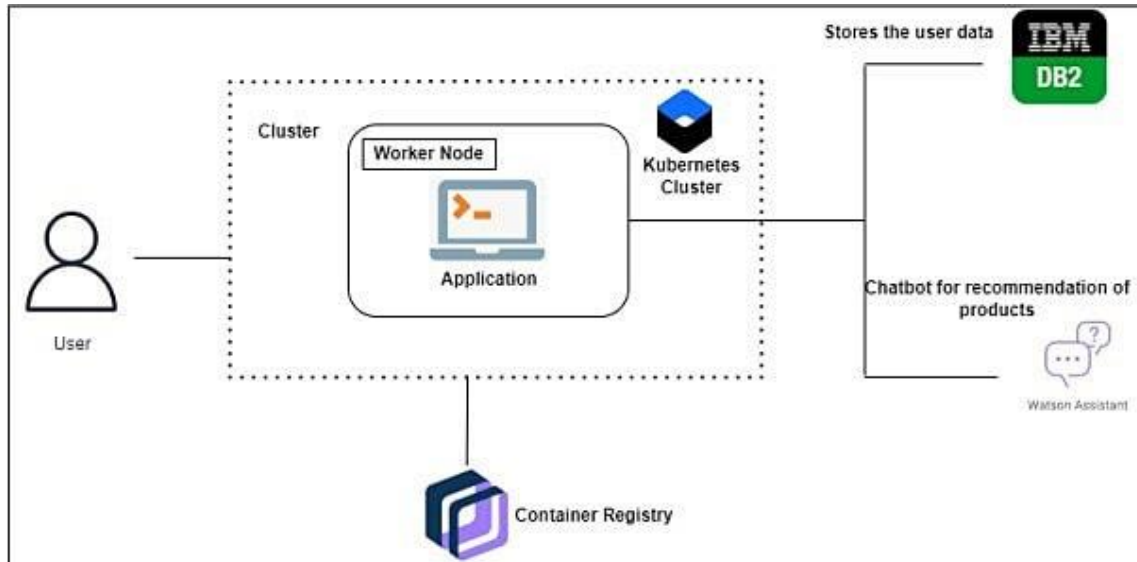

5.3 USER STORIES:

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile/Web user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Gmail	I can see the Dashboard	Medium	Sprint-1
	Login	USN-4	As a user, I can log into the application by entering email & password	I can see the Dashboard	High	Sprint-1
	Dashboard	USN-5	As a user, I can see the available products in the dashboard.	I can order the products	Medium	Sprint-2
		USN-6	As a user, I can access the Chatbot	I can interact with the Chatbot	High	Sprint-2
	Chatbot	USN-7	As a user, I provide my preferences to the Chatbot	I can order the products that I need	High	Sprint-3
	Notifications	USN-8	As a user, I can receive notifications about the status of the order.	I can access the status through email or app	High	Sprint-4
Administrator	Login	USN-1	As an admin, I can log into the administrator login portal.	I can access the admin cloud.	High	Sprint-1
	Cloud	USN-2	As an admin, I can update the products in the Cloud database.	I can manage the Cloud services	High	Sprint-2
	Order Status	USN-3	As an admin, I can confirm the order placement	I can manage the order confirmation	High	Sprint-3
		USN-4	As an admin, I can update the status of the order	I can manage the order status	High	Sprint-3
	Mail	USN-5	As an admin, I can update the status through email to the users	I can send mail to users	High	Sprint-4

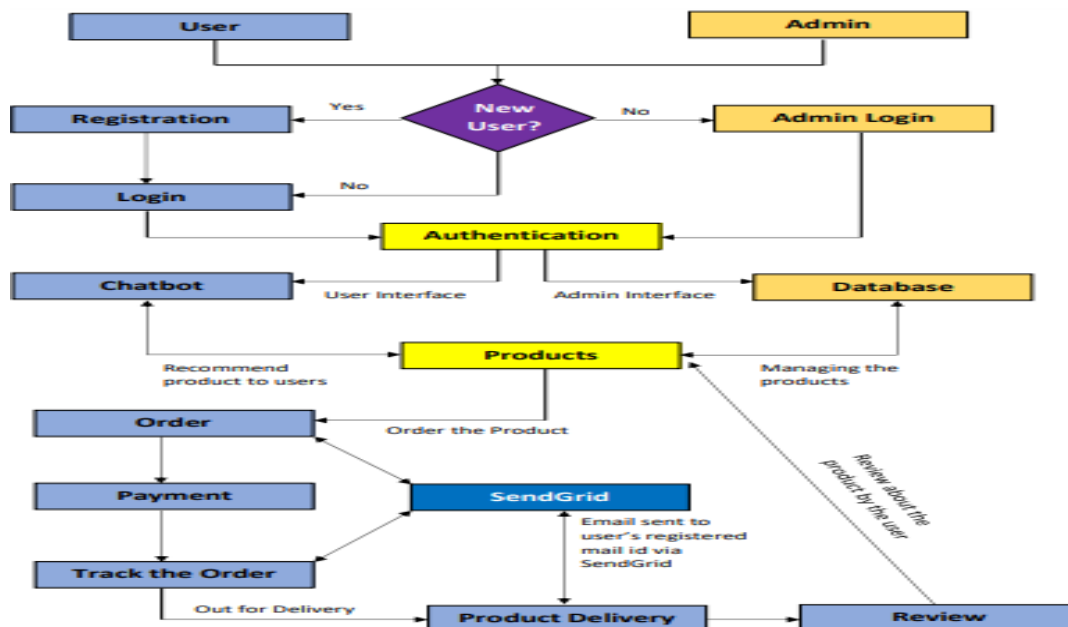

5.2 Solutions & Technical Architecture

Solution Architecture

Technical Architecture:

The Deliverable shall include the architectural diagrams below

6. PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation:

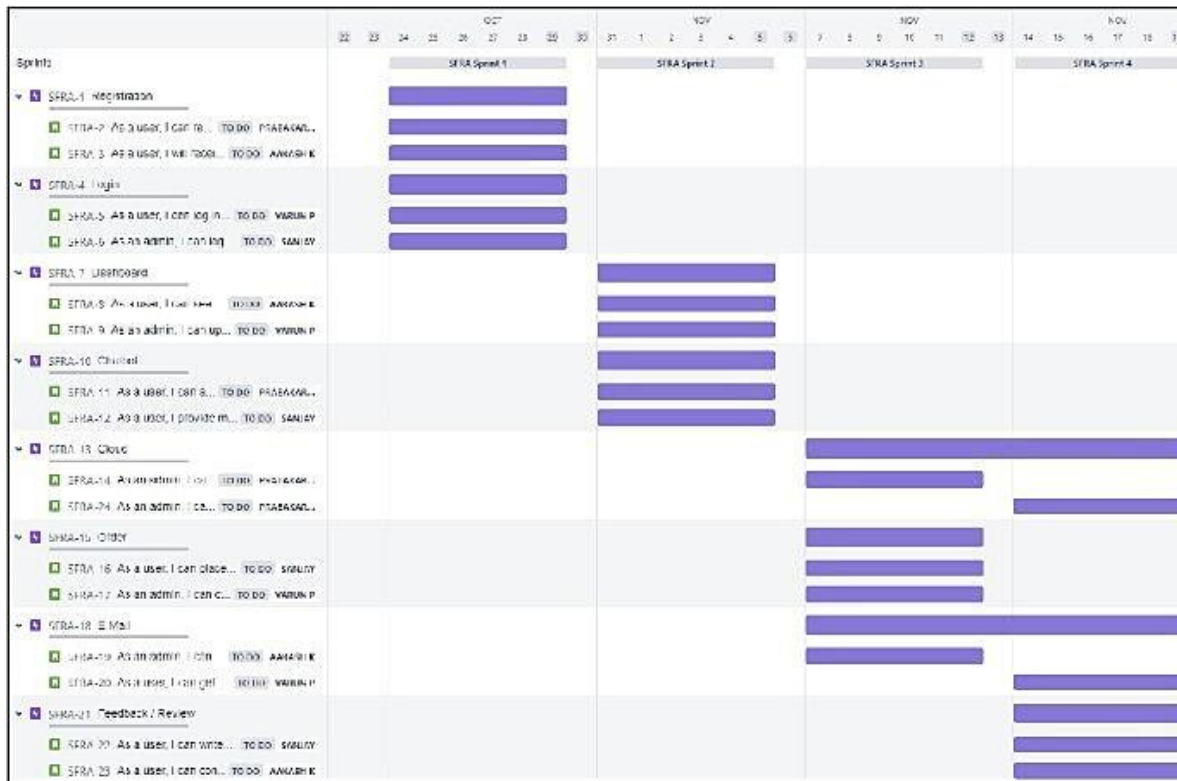

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	5	High	Prabakaran G
Sprint-1		USN-2	As a user, I will receive confirmation email once I have registered for the application	5	High	Aakash K
Sprint-1	Login	USN-3	As a user, I can log into the application by entering email & password	5	High	Varun P
Sprint-1		USN-4	As an admin, I can log into the admin portal	5	High	Sanjay D
Sprint-2	Dashboard	USN-5	As a user, I can see the available products in the dashboard	4	Medium	Aakash K
Sprint-2		USN-6	As an admin, I can update the product details and manage reviews of the product	5	High	Varun P
Sprint-2	Chatbot	USN-7	As a user, I can access the Chatbot	7	High	Prabakaran G
Sprint-2		USN-8	As a user, I provide my preferences to the Chatbot	4	High	Sanjay D

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-3	Cloud	USN-9	As an admin, I can update the products in the Cloud database.	6	High	Prabakaran G
Sprint-3	Order	USN-10	As a user, I can place the order and make payment.	5	High	Sanjay D
Sprint-3		USN-11	As an admin, I can confirm and update the status of the order	5	High	Varun P
Sprint-3	E-Mail	USN-12	As an admin, I can update the status through email to the users	4	Medium	Aakash K
Sprint-4	E-Mail	USN-13	As a user, I can get confirmation mail after receiving the product	5	High	Varun P
Sprint-4	Feedback / Review	USN-14	As a user, I can write feedback about the product	4	Medium	Sanjay D
Sprint-4		USN-15	As a user, I can contact with the Chatbot if the product received is not satisfied and can also request to return product	5	Medium	Aakash K
Sprint-4	Cloud	USN-16	As an admin, I can manage the user requests and feedbacks about the product and can update in the database	6	High	Prabakaran G

6.2 Sprint Delivery Schedule:

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

6.3 Reports from Jira Software:

7. CODING & SOLUTIONING

7.1. Login:

```
#Login process
@app.route('/login')def
login():
    return render_template('login.html')

@app.route('/checkrec',methods = ['POST', 'GET'])
def checkrec():
    msg = ' '
    if request.method == 'POST':
        email = request.form['email']
        password = request.form['password']
        sql = "SELECT * FROM users WHERE Email =?"
        stmt = ibm_db.prepare(conn, sql)
        ibm_db.bind_param(stmt,1,email)
        ibm_db.execute(stmt)
        account = ibm_db.fetch_both(stmt)
        accounts=account
        if (account):
            if(password == accounts['PASSWORD']):
                msg = 'Logged in successfully !'
                return render_template('index.html',msg=msg)
            else :
                msg='Wrong Credentials'
        return render_template('login.html',msg=msg)
```

7.2. Adding and Removing Products by Admin:

```
#Adding products by Admin
@app.route('/addproduct',methods=['POST', 'GET'])
def addproduct():
    if request.method == 'POST':
        image = request.form['image']
        productname = request.form['productname']
        cost = request.form['cost']
        category = request.form['category']
        insert_sql = "INSERT INTO pro VALUES(?,?,?,?)"
        stmt = ibm_db.prepare(conn, insert_sql)
        ibm_db.bind_param(stmt, 1, image)
        ibm_db.bind_param(stmt, 2, productname)
        ibm_db.bind_param(stmt, 3, cost)
```

```

        ibm_db.bind_param(stmt, 4, category)
        ibm_db.execute(stmt)
        return redirect('/adminhome')

#Deleting products by Admin
@app.route('/delete/<productname>')
def delete(productname):
    sql = f"SELECT * FROM pro WHERE productname='{escape(productname)}'"
    stmt = ibm_db.exec_immediate(conn, sql)
    product = ibm_db.fetch_row(stmt)
    if product:
        sql = f"DELETE FROM pro WHERE productname='{escape(productname)}'"
        print(sql)
        stmt = ibm_db.exec_immediate(conn, sql)

    if products:

```

```
return  
render_template('product.html',products=products)return  
redirect('/shop')
```

8. TESTING

8.1 Test Cases:

A test case has components that describe input, action and an expected response, in order to determine if a feature of an application is working correctly. A test case is a set of instructions on “HOW” to validate a particular test objective/target, which when followed will tell us if the expected behavior of the system is satisfied or not.

Characteristics of a good test case:

1. Accurate: Exacts the purpose.
2. Economical: No unnecessary steps or words.
3. Traceable: Capable of being traced to requirements.
4. Repeatable: Can be used to perform the test over and over.
5. Reusable: Can be reused if necessary.

8.2 USER ACCEPTANCE TEST:

Purpose of Document:

The purpose of this document is to briefly explain the test coverage and open issues of the Smart Fashion Application project at the time of the release to User Acceptance Testing (UAT).

Defect Analysis :

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved.

Resolution	Severity1	Severity2	Severity3	Severity4	Subtotal
ByDesign	8	4	2	3	17
Duplicate	1	0	2	1	4

End Of Test Report								
S.N o	Project Overview	NFT Test approach	NFR - Met	Test Outcome	GO/NO-GO decision	Recommendatio ns	Identified Defects (Detected/Closed/Op en)	Approvals/SignOff
1	User	New User	Yes	Registration successful	GO	Validation login details	Closed	Success
2	Products	Checking <u>Updatation</u>	Yes	<u>Updatation</u> incomplete	GO	None	Closed	Success
3	Admin Page	Manage products	Yes	Product update incomplete	NO-GO	Update product details	Open	Success

10. ADVANTAGES & DISADVANTAGES

Advantages:

- i. Effective Recommendations are provided
- ii. Best Offers and Deals
- iii. Comparisons
- iv. No pressure shoppings
- v. More varieties
- vi. Notifications via chatbot
- vii. Customer Feedback

Disadvantages:

- viii. It requires an active internetconnection

11. CONCLUSION

The smart fashion recommender system uses a chat bot as a primary mechanism to interact with users, collect user interest and recommend productsperiodically. A chat bot is designed to improve user experience by interacting with users. Users need not navigate between multiple pages to find an appropriate product. The system is designed to minimize the efforts taken by customers to search for the required product.

12. FUTURE SCOPE

The future scope of the chat bot include adding products to the cart, displaying cart items, order history, and payment through the chat bot. It makesthe interface more easier for user to look up for the products which will also saves time and money. The Security would be enhanced in order to secure the user details and the user details should be used only for recommendations and not for other violated activities.
